

THE AI BESTIE

AI tutorials even your mom can understand

LESSON 5

Your Photos Folder Is a Crime Scene.

3,000 trip photos, all named **IMG_4821**, and you are never going to sort them. **Claude Code** will. **While you make coffee.**

Renamed

Every single file, by day and place.

Sorted

Perfect time order, day by day.

Foldered

One folder per day. Junk in its own pile.

Here's the thing nobody tells you

Your photos are **already sitting on your computer**. Claude Code can go **right into that folder** and clean up the whole mess for you. No apps. No subscriptions. No dragging 3,000 files around by hand. Just VS Code, the same way you set it up in Lesson 2.

Do it in 5 steps

Same VS Code setup as Lesson 2. About 5 minutes of you, then Claude does the rest. Tap any black box to copy.

1

Open VS Code

Remember Lesson 2? The app *talks*, VS Code *builds*. This is the same trick, just pointed at your photos. Open **VS Code** like any app.

Not set up yet? These two get you there:

Lesson 1: What is Claude Code? →

Lesson 2: Claude inside VS Code →

2

Put the whole trip in one folder

Get every photo, video and screenshot from the trip into **one folder** on your computer. Call it something like **Phuket Trip** and pop it on your Desktop.

tip: on iPhone, AirDrop the whole trip to your Mac in one go.

3

Drag the folder onto VS Code

Grab your **Phuket Trip** folder and **drag it onto the VS Code window**. That's it. Your photos show up in the left sidebar. Then click the *** spark** icon to open Claude.

Why open the folder? Because now Claude is **inside** it. No file paths, no typing. It can see every photo and move them around for you.

4

Paste the prompt & fill in the blanks

Change the **trip details** to yours. A rough day plan is enough: *Day 1 Old Town, Day 2 beach club, Day 3 island hopping*. For the **Folder** line, just type the folder name, like **Phuket Trip**. Claude is already inside it.

PASTE THIS PROMPT

 copy

I just came back from a trip and my photos and videos are a mess. Please organize them for me.

Folder: [paste the path to your folder, e.g. Desktop/Phuket Trip]

My trip: [destination], [start date] to [end date]. Rough plan: Day 1 [what you did], Day 2 [what you did], Day 3 [what you did], and so on.

Here is exactly how I want it organized:

Go through every file in the folder: photos, videos, and screenshots.

Read the date taken on each file. If the file has a location saved in it, read that too.

Create one folder per day, named so the folders sort in order: "2026-08-12 - Day 1 - Phuket Old Town".

Inside each day folder, create three subfolders: "Photos", "Videos", and "Screenshots". Move each file into the right one based on its file type.

Rename every file so it sorts perfectly in time order, like this: "2026-08-12 - Phuket Old Town - 001", "2026-08-12 - Phuket Old Town - 002", and so on. Keep the original file extension. Use the location in the name when you know it, otherwise use my day plan above.

Put any clearly blurry or accidental shots into one folder called "Maybe Delete". Do not delete anything yourself.

Never delete or overwrite any file. Only rename and move.

When you are done, show me a summary of how many files went where.

If you are not sure which day or place a file belongs to, ask me instead of guessing.

watch the folders appear in the sidebar, live. then go make your coffee.

5

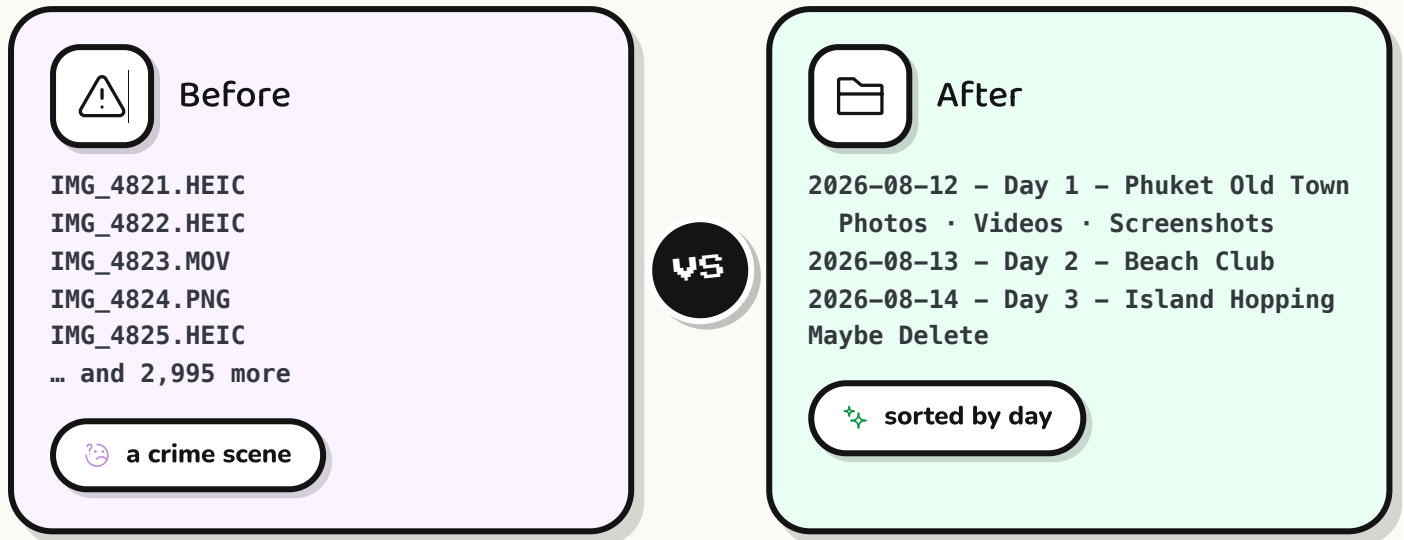

Check the Maybe Delete pile

When it's done, Claude shows you a **summary** of how many files went where. Open the **Maybe Delete** folder, keep what you love, bin the rest. **You** make that call. Never Claude.

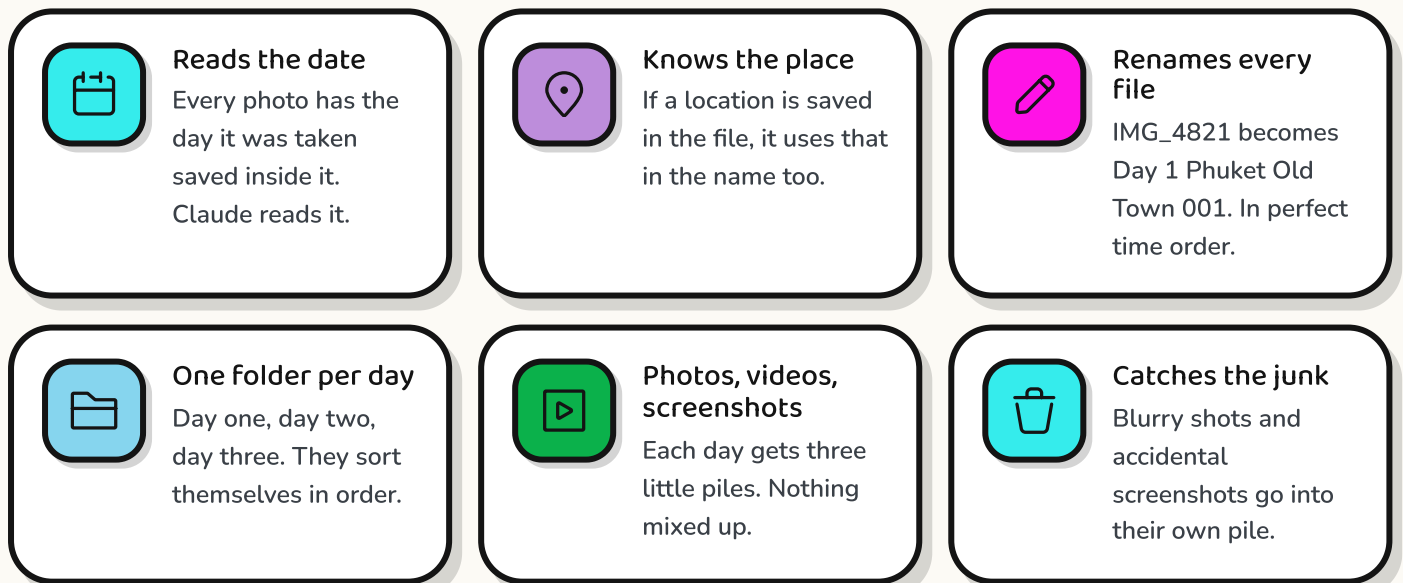

Before vs after

Same folder. Same 3,000 photos. Totally different life.

What it actually does

No code. It just reads what your phone already saved in each file.

It never deletes. Ever.

The prompt tells Claude to **only rename and move**. Blurry shots go into a Maybe Delete folder and **you** make the call. Not sure which day a file belongs to? It asks you instead of guessing.

three thousand photos. while you make coffee.

"Your photos folder is a crime scene. Claude can fix it in minutes."

· *Wendy, your AI Bestie*

Your next trip is already sorted

Keep this prompt. Every holiday from now on, it's one paste and done.

You do not need to know any code.

You just need **the right prompt**. And I wrote it for you. Save this page, and next time you come home with **3,000 photos**, you already know what to do.

*save this & comment **HOLIDAY** for the exact prompt*
