

THE AI BESTIE

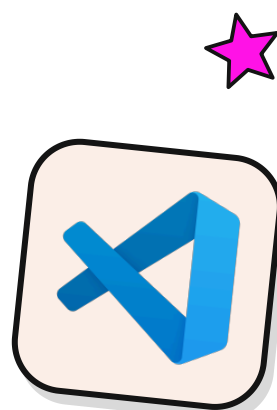

AI tutorials even your mom can understand

LESSON 2

You're Using Claude All Wrong

Most people only *chat* with Claude. But the real magic is when it actually **builds** for you — live, inside VS Code.

Set it up in 3 steps

Free, and about 5 minutes. Tap any black box to copy.

1

Get VS Code

Download **Visual Studio Code** — it's free. Open Chrome or Safari and go here:

OPEN IN YOUR BROWSER

copy

code.visualstudio.com

Download, install, and open it like any app.

2

Add Claude Code

Inside VS Code, open **Extensions**, search “**Claude Code**”, and click **Install**. Then sign in (you'll need a Claude Pro or Max plan).

Where's Extensions? The four-squares icon in the left sidebar — or press **Cmd/Ctrl + Shift + X**. Then click the *** spark** icon to open Claude.

3

Open a folder & make something

Open any folder, then tell Claude your wish. Paste this to start:

TRY THIS PROMPT

copy

Build me a gorgeous landing page for my coffee brand — soft pastel colours, a big friendly headline, a sign-up button, and a little about-me section. Make it stunning.

watch it build, right in front of you.

Here's the mistake

The thing almost everyone gets wrong with Claude Code.

Talking ≠ building

Claude Code inside the **Claude app** just **talks** to you. It gives you answers — but it doesn't actually build anything. The fun happens somewhere else...

Answers vs. actually building

Same Claude — totally different powers.

In the Claude app

You get **answers**. It talks back, suggests, explains... but nothing actually gets built.

just talks

VS

Inside VS Code

Claude **makes the thing** — websites, files, tools — **live, right in front of your eyes**.

it builds, live

"The app talks. VS Code builds. Once you see it happen, you can't go back."

— Wendy, your AI Bestie

The secret to great results

Why some people get stunning sites and others get basic ones.

Be specific. Be delusional.

Describe your **biggest, wildest vision** — the colours, the vibe, every detail. The more you describe, the better it builds. Not the **basic designs** everyone and their uncle is making.

your yap is your superpower
